# What is the Internet of People?

The Internet of People adds its own blockchain, token and governance tools to Libertaria technology to create the first true global decentralized society.

Our powerful person-to-person technology allows you to communicate, do business and use familiar apps without losing control of your private data.

It's internet for the people, by the people, with no unwanted middlemen.

**Middleman-Server**  
e.g. Facebook, Airbnb  
Wigly, Uber

**Person-to-Person**  
No middlemen!

# An Internet of People. Liberated.

Internet of People is so much more than just technology. It's a global community and entrepreneurship project that has already transformed the lives of people from some of the world's most unstable countries.

And unlike other cryptocurrencies, loP's unique global Chapter system rations mining, reducing energy use and allowing everyone to participate fairly. Wherever and whoever you are, we're always looking for likeminded people to join our community and help it thrive.

# What is Libertaria?

Libertaria is creating technology for a decentralized world. Our cutting-edge software and hardware allow people to connect and transact directly, safely and privately while keeping full control of their data. We're developing tools to connect communities and create local economies, providing an alternative for people seeking a fairer, more decentralized, freer world.

Libertaria is the only project building the whole decentralization stack. Everything from our innovative Mercury peer-to-peer network, communications and dApps layer to Hydra, a new type of blockchain protocol. Our TitaniaOS gives everyone easy access to a plug-and-play network node for safe and private access to the network.

Libertaria is open source and free for everyone to use. We particularly invite like-minded projects to use our protocols and techstack and develop new dApps for TitaniaOS.
